

AI-native enterprise solutions. Delivered in days.

Unframe is the Managed AI Delivery Platform that helps enterprises turn high-priority AI use cases into production-ready solutions in days, not months.

AI requires tailoring to your use case and your enterprise for relevant and accurate outcomes

THE PROBLEM

AI adoption is happening, but business value is often a struggle.

- Most enterprise AI use cases require customization, accuracy, and governance that off-the-shelf tools cannot provide.
- Solutioning and building these systems in-house is slow, expensive, and complex.
- Despite massive investment, only **5% of companies capture most AI value.***

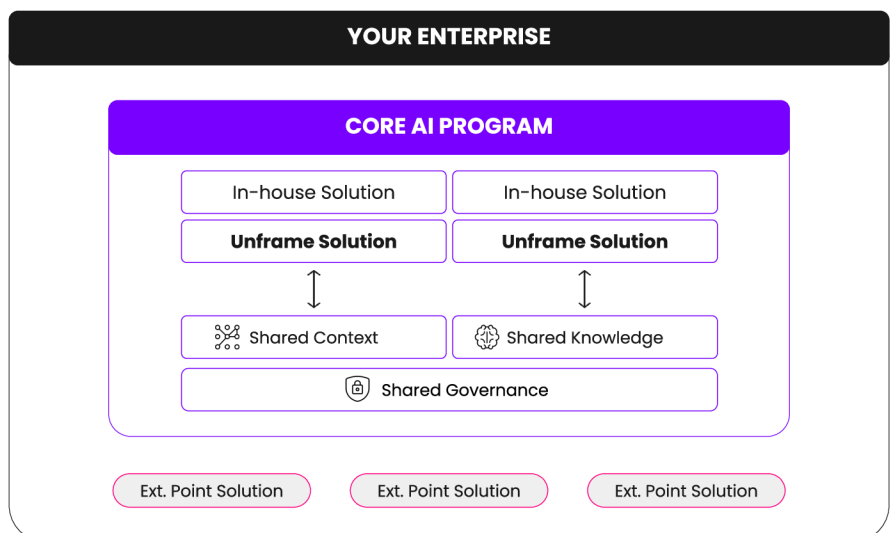

THE SOLUTION

Get production-ready, AI-native enterprise solutions. Perfectly tailored to your needs.

- **Together**, we define the right use case.
- In days, you receive a **production-ready solution**.
- Founded and **led by cybersecurity and AI experts**, your security is our top priority.
- You subscribe only **when you're happy** with the outcome.

IT'S NOT BUILD VS BUY, IT'S A UNIFIED PROGRAM

Consider this all as part of your unified AI program, rather than tools added separately. Unframe becomes a seamless and secure part of your core AI program through shared context, knowledge, and governance. All solutions have APIs & MCPs.

WHERE DO WE USUALLY START?

Many solutions fall into one of these categories, but with Unframe there are no limits. Each solution is tailored to your business.

Observability & Reporting

Understand your business with cross-system search, natural-language queries, and auto-generated dashboards across fragmented data.

Data extraction & Abstraction

Turn PDFs, docs, spreadsheets, images, and more into structured intelligence by extracting info across languages and formats.

Automation & Agents

Use AI agents for complex workflows—monitored, human-guided, and integrated with Slack, Teams, email and enterprise processes.

HOW DOES THE UNFRAME PLATFORM WORK?

The Unframe platform is composed of deep technical building blocks with a dedicated blueprint that assembles and configures the building blocks into a turnkey solution that's ready for you to use.

Transparent. Governed. Ready to deploy.
No operational burden.

- Full visibility into how AI systems operate - from data ingestion to decisions and actions.
- Permission-aware execution with auditable workflows and optional human-in-the-loop oversight.
- Explicitly defined data flows and integrations with complete activity logging.

No data shared outside your perimeter

INTRODUCING: AGENT STUDIO

A control plane for teams to create, configure, test, and orchestrate AI agents across enterprise data and systems.

- Create agents from templates and define the tools and knowledge they can access through the Knowledge Fabric.
- Connect agents to enterprise systems and external tools using MCP-compatible servers.
- Monitor how agents run, interact with systems, and execute tasks across workflows.
- Enforce governance policies for data access, system permissions, and operational guardrails.
